COLLEGE OF COMPUTING AND
INFORMATION TECHNOLOGIES

OPERATING SYSTEMS COURSE PROJECT RUBRICS

Course Code/Subject	CCOPSYSL	**Term/AY**	1st / 2025-2026
Section	COM232	**Date**	October 14, 2025
Project Topic	Deadlock Detection and Prevention		
Group # | Leader Name	Jay Arre Talosig		
Member's Name	1.	Member's Name	3.
Member's Name	2.	Member's Name	4.

Criterion	Exceptional	Proficient	Satisfactory	Needs Improvement	PTS
Algorithm Implementation	The algorithm is implemented correctly with no bugs, and it works as intended for all test cases.	The algorithm is implemented correctly with no bugs, and it works as intended for all test cases.	The algorithm is implemented correctly with no bugs, and it works as intended for all test cases.	The algorithm is implemented correctly with no bugs, and it works as intended for all test cases.	
Code Structure and Readability	Code is well-organized, follows Java coding standards, and is highly readable. Proper use of functions and modularity.	Code is well-organized, follows Java coding standards, and is highly readable. Proper use of functions and modularity.	Code is well-organized, follows Java coding standards, and is highly readable. Proper use of functions and modularity.	Code is well-organized, follows Java coding standards, and is highly readable. Proper use of functions and modularity.	
Efficiency & Optimization	Algorithm is highly optimized for performance. Efficient use of memory and CPU resources.	Algorithm is highly optimized for performance. Efficient use of memory and CPU resources.	Algorithm is highly optimized for performance. Efficient use of memory and CPU resources.	Algorithm is highly optimized for performance. Efficient use of memory and CPU resources.	
Understanding of OS Concepts	The algorithm demonstrates a deep understanding of relevant OS concepts (e.g., scheduling, memory management, synchronization).	The algorithm demonstrates a deep understanding of relevant OS concepts (e.g., scheduling, memory management, synchronization).	The algorithm demonstrates a deep understanding of relevant OS concepts (e.g., scheduling, memory management, synchronization).	The algorithm demonstrates a deep understanding of relevant OS concepts (e.g., scheduling, memory management, synchronization).	
Documentation	Documentation is thorough, explaining all key parts of the algorithm, design decisions, and the underlying OS concepts. Code is	Documentation is thorough, explaining all key parts of the algorithm, design decisions, and the underlying OS concepts. Code is	Documentation is thorough, explaining all key parts of the algorithm, design decisions, and the underlying OS concepts. Code is	Documentation is thorough, explaining all key parts of the algorithm, design decisions, and the underlying OS concepts. Code is

	well-commented and easy to follow.	well-commented and easy to follow.	well-commented and easy to follow.	well-commented and easy to follow.	

Total Score and Feedback

☐ Exceptional	9-10	Outstanding work that goes above and beyond expectations.	TOTAL POINTS EARNED	
☐ Proficient	7-8	Meets the expectations with some minor issues.		
☐ Satisfactory	5-6	Adequate work with some gaps in understanding or execution.		
☐ Needs improvement	1-4	Significant issues or incomplete work.		
Evaluated by: _____ Name of Course Instructor/Date		**Remarks/Comments**
